SMART  CELLS

SECURE YOUR CHILD'S HEALTH LONG INTO THE FUTURE

1,000s of mothers in the UK have chosen to have their new-born baby's umbilical cord blood collected and the stem cells stored. The use of stem cells is important in the treatment of many childhood diseases such as leukaemia.

Parents realise that storing their baby's stem cells with SMART CELLS could secure their child's health against many diseases long into the future.

For more details on how to preserve your baby's stem cells, telephone our **CARELINE** on **020 7486 4686** or apply online at **www.smartcells.com**

*"if those cells are there
when you need them,
you will never regret
your decision"*

Sunday Times

*"it takes about
3 minutes and cannot affect
either mother or baby"*

Daily Mirror
